

DCAS MQTT Publisher.exe

IMPORTANT DISCLAIMER

READ THIS CAREFULLY BEFORE USING THIS SOFTWARE

THIS IS A COMMUNITY TOOL - NOT AN OFFICIAL DISTECH CONTROLS PRODUCT

This application ("DCAS MQTT Publisher.exe") is a special project developed by members of the Distech Controls Advanced Support Team. It is not a sanctioned, endorsed, certified, or official product release by Distech Controls Inc. or its affiliates.

1. PROJECT STATUS AND NATURE

INDEPENDENTLY DEVELOPED. This utility was created as a community support project to configure MQTT broker connections, publish MQTT topic payloads, retrieve oBIX data, and optionally publish values at configured intervals.

NOT AN OFFICIAL PRODUCT. DCAS MQTT Publisher.exe is not part of the official Distech Controls product portfolio and has not been released through standard Distech Controls product management, quality assurance, cybersecurity, or lifecycle processes.

DISCRETIONARY SUPPORT. Any assistance provided by the Advanced Support Team is voluntary, limited, and offered on a best-effort basis without guaranteed response or resolution.

2. WARRANTY DISCLAIMER

THIS SOFTWARE IS PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, ACCURACY, AVAILABILITY, SECURITY, COMPATIBILITY, OR NON-INFRINGEMENT.

TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, DISTECH CONTROLS INC., ITS AFFILIATES, EMPLOYEES, AND THE AUTHORS OR CONTRIBUTORS DISCLAIM RESPONSIBILITY FOR CLAIMS, LOSSES, DAMAGES, OR OTHER LIABILITY ARISING FROM OR RELATED TO THE SOFTWARE OR ITS USE.

3. NOT COVERED BY DISTECH CONTROLS SUPPORT

- X This tool is not covered by a Distech Controls product warranty.
- X This tool is not covered by standard Distech Controls support agreements or service level agreements.
- X This tool is not subject to official product release, validation, maintenance, or update commitments.
- X Use of this tool does not create any obligation for Distech Controls or the Advanced Support Team to investigate, correct, enhance, or continue the software.

4. USE AT YOUR OWN RISK

DCAS MQTT Publisher.exe can connect to MQTT brokers, publish retained or non-retained messages at QoS 0, 1, or 2, poll oBIX endpoints, import and export topic data, and perform recurring publication. Incorrect configuration or operation can affect connected brokers, subscribers, automation workflows, controllers, or downstream systems.

Users assume all risks associated with:

- Broker addresses, ports, client identifiers, topics, subtopics, payloads, QoS levels, retained-message settings, Last Will settings, and publication intervals.
- Publishing incorrect, stale, duplicated, excessive, or unintended values.
- Automated or interval-based publishing, including first-cycle publication of all configured topics.

- Changes to connected systems, alarms, commands, trends, integrations, or supervisory behavior caused by MQTT consumers.
- oBIX URL selection, point mapping, data interpretation, polling frequency, and synchronization behavior.
- Network load, broker capacity, topic authorization, system availability, compatibility, and regulatory compliance.
- Use in test, demonstration, commissioning, production, life-safety, mission-critical, or otherwise sensitive environments.

5. SECURITY, CREDENTIALS, AND CERTIFICATES

The application handles sensitive connection information. Based on the current implementation, broker passwords, client-certificate passwords, and oBIX credentials may be saved in the user configuration file without encryption. Users are solely responsible for securing the workstation, user profile, configuration directory, exported CSV files, certificates, and any copies or backups.

- Use dedicated, least-privilege accounts and restrict broker and oBIX permissions to only what is required.
- Do not distribute configuration files, logs, screenshots, exported CSV files, or certificates that contain sensitive information.
- Protect private keys and password-protected certificate files, and follow applicable credential rotation policies.
- Validate the destination broker, endpoint, topic hierarchy, and access controls before publishing.
- Do not enable options that accept invalid, untrusted, expired, mismatched, or self-signed certificates unless the risk has been reviewed and explicitly accepted in a controlled environment.

WARNING. Enabling an "Allow invalid certificate" option weakens certificate validation and can expose communications to impersonation or interception. This option should not be used as a substitute for proper certificate deployment and trust configuration.

6. WHAT THIS TOOL IS NOT

DCAS MQTT Publisher.exe is not:

- ✗ An official Distech Controls product or supported product feature.
- ✗ A substitute for approved MQTT, oBIX, integration, commissioning, cybersecurity, backup, or change-management procedures.
- ✗ A guarantee of message delivery, ordering, persistence, data quality, endpoint availability, or subscriber behavior.
- ✗ A security assessment, certificate-management system, credential vault, or network-monitoring platform.
- ✗ Validated for life-safety, emergency control, medical, industrial safety, or other mission-critical use.
- ✗ A commitment by Distech Controls or the authors to ongoing development, compatibility, maintenance, or support.

7. INTENDED USERS AND REQUIRED PRECAUTIONS

This tool is intended for qualified technical professionals who understand MQTT, oBIX, TCP/IP networking, TLS certificates, broker permissions, building automation systems, and the operational consequences of publishing values to connected systems.

Before any production use, the user should:

- Obtain authorization from the system owner and follow applicable organizational change-control and cybersecurity requirements.
- Test in an isolated or non-production environment using non-critical topics and limited permissions.
- Back up relevant broker, controller, integration, and application configurations.

- Confirm topic names, payload formats, QoS, retain behavior, polling intervals, and subscriber handling.
- Monitor the first manual and automated publication cycles and maintain a documented rollback plan.
- Remove or rotate credentials and certificates if files or configuration data are exposed.

8. DATA, CONFIGURATION, AND OPERATIONAL RESPONSIBILITY

The user is solely responsible for the accuracy, authorization, sensitivity, retention, and handling of all broker settings, credentials, certificates, oBIX endpoints, imported or exported CSV data, topic mappings, payloads, logs, and saved configuration data.

The software may create or update local configuration data under the active Windows user profile. Uninstalling or deleting the executable may not remove saved configuration files. Users must review and securely remove retained files when they are no longer required.

Diagnostic logs can include endpoint names, addresses, topic paths, status details, and error information. Review logs before sharing them and redact sensitive or customer-identifying data as necessary.

9. ACKNOWLEDGMENT AND ACCEPTANCE

BY DOWNLOADING, INSTALLING, LAUNCHING, CONFIGURING, OR USING DCAS MQTT Publisher.exe, YOU ACKNOWLEDGE THAT:

1. You have read and understood this disclaimer in its entirety.
2. You understand that this is not an official Distech Controls product.
3. You accept that the software is provided as is and without warranty.
4. You are authorized to access each configured broker, oBIX endpoint, controller, certificate, account, and topic.
5. You assume all risks associated with manual and automated message publication.
6. You are responsible for protecting credentials, certificates, configuration files, exports, and logs.
7. You will test the tool and its configuration before use in any production environment.
8. You will not hold Distech Controls Inc., its affiliates, employees, authors, or contributors liable for outcomes arising from use or inability to use the software.
9. You understand that support, updates, continued compatibility, and future development are discretionary and not guaranteed.

10. LIMITATION OF LIABILITY

TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, IN NO EVENT SHALL DISTECH CONTROLS INC., ITS AFFILIATES, EMPLOYEES, AUTHORS, OR CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, PUNITIVE, OR CONSEQUENTIAL DAMAGES, INCLUDING LOSS OF DATA, LOSS OF PROFITS, BUSINESS INTERRUPTION, SYSTEM OUTAGE, CYBERSECURITY INCIDENT, EQUIPMENT OR PROPERTY DAMAGE, OR COSTS OF RECOVERY, ARISING FROM THE USE OF OR INABILITY TO USE THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

11. SUPPORT AND ASSISTANCE

Support, if offered, is provided on a best-effort and discretionary basis. There are no guaranteed response times, resolution commitments, service level agreements, or assurances that a reported issue will be investigated or corrected. For official Distech Controls product support, use official support channels and approved tools.

12. QUESTIONS OR CONCERNS

Questions about this disclaimer or the community project should be directed to the tool maintainer or the Advanced Support Team contact that supplied the software. Questions about official Distech Controls products should be directed through official Distech Controls support channels.
